

Custom Forms

The Forms Builder Manager's simple to use GUI palette allows organizations to quickly create forms, define data elements within the forms, and deploy the forms to E Team users.

Bringing the Power of Web 2.0 to Emergency Management

NC4 has dedicated over two years of research, development, testing and customer involvement to its R9 release, to bring users even more sophisticated incident management functionality, while keeping the application flexible and easy to use. NC4's R9 harnesses the power of Web 2.0 technology in its Custom Forms module, giving organizations with a command and control mission even greater flexibility in tracking, analyzing and processing information. R9 is the only incident management solution available that gives organizations an easy-to-customize solution in a commercial off-the-shelf (COTS) product.

NC4's R9 provides comprehensive out of the box functionality that includes standard ICS forms pre-built and ready for operational use along with powerful capabilities to tailor the system for the specific needs of your organization. Custom Forms provides organizations a simple to use, yet sophisticated design environment for creating and publishing new report forms to the E Team application, customizing controls on pre-existing report forms, and the ability to add workflow and business logic rules to help your organization manage emergencies more effectively.

NC4's R9 Custom Forms Builder brings the power of Web 2.0 technology to Federal, state, county and local organizations tasked with managing emergencies. Custom Forms provides organizations with the following benefits:

- ☰ Easily customize E Team to suit your emergency management needs
- ☰ Ability to comply with changing Federal and state regulations and standards
- ☰ Incorporate your organization's business logic to support your operations
- ☰ Leverage existing capabilities in E Team such as responsibility, related event/incident/activity, location, geo-location, distribution, notification and data sharing
- ☰ Share custom form designs to enhance collaboration with mutual aid and information sharing partners

Easy to use Forms Builder Manager

Unlike other products in the market, the Custom Forms feature in R9 includes a real GUI for form design, and the ability to recreate complicated paper forms with precise WYSIWYG (what you see is what you get) formatting. R9's simple to use GUI palette allows organizations to easily create forms, with the ability to define and validate data elements such as text boxes, dropdown lists and dates. With a few clicks of the mouse, users can drag-and-drop data elements from the user-friendly toolset, quickly building a new form to handle any type of dynamic data requirements that may occur during large events and disasters. While simplicity is its strength, the robust foundation of Custom Forms enables more experienced IT types to create forms with sophisticated business logic.

Once created, the Custom Form(s) can be made available as a standalone form or as a tab element on an existing E Team form, dynamically enabling the use of the core components of the application such as geo-location, notification, access control, data sharing and targeted alerts.

One example of the power of Custom Forms is the implementation of the National Information Exchange Model (NIEM) for Suspicious Activity Reports (SARs). Using the pre-existing Tip Report in E Team and adding a custom tab on the Tip Report for capturing SAR data elements, an organization can be in full compliance with the NIEM standard for SARs.

Customizing a solution for your specific organizational needs

For IT departments tasked with building a customized incident management solution, look no further than NC4. With over 200 collective years of experience in emergency and event management, NC4 is the smart choice to partner with for designing a customized solution to fit your organization's specific needs. With its Web 2.0 underpinnings, Custom Forms can be utilized as a platform for building advanced operational workflow and business logic rules.
